Funnel trap used for ambrosia beetles.

- In 2003, we started trapping ambrosia beetles and other wood boring beetles in ornamental nurseries. This was a new project for us.
- We plan to determine which species are present and when they occur during the season.

Some beetle species captured in the funnel trap.

We thank the following nurseries for providing research sites, time, and/or materials:

Brotzman's, Herman Losely & Son, Moretti, Ridge Manor, and Sunleaf.
